

PMG Network Members' Directory of Products & Services 2013/14

Foreword

The PMG Network is the name we've given to our collection of smaller member firms, each of which employ between ten and 99 employees. Under the Chairmanship of Karen Friendship, the Network has grown from nothing to over thirty members in the space of just a few years. Between them, they represent an amazing array of what is best about the manufacturing and engineering sectors across the Plymouth travel-to-work-area from SE Cornwall to West Devon through to the South Hams, Teignbridge and Torbay. Several are national award winners.

These firms produce a remarkably diverse range of goods including everything from innovative wound closure and sealant products to unmanned submersible vehicles. Several offer complementary services too. Targeting an assortment of sectors and markets, they export literally across the globe.

I commend this directory to you and hope that it will enhance your appreciation of what is manufactured here in the far south-west of England.

Steve Cardew
Chairman of the Plymouth Manufacturers' Group.
November 2013

PS If you're a manufacturer and you aren't currently a member of the PMG's Network and would like to join, please contact our Secretary - Steve Gerry stevegerry@dsl.pipex.com

20 20 Plastics Ltd Product/Market Analysis

20 20 Plastics Limited is a British manufacturer of bespoke products made from PVC and polypropylene. We're based in the South West between Exeter and Plymouth.

Our core business is PVC wallets and pockets. Styles and sizes vary from business/credit card wallets to large PVC Display boards. These are produced in hundred's or tens of thousands using high frequency welding. We also make PVC and polyprop ring binders, presentation cases and folders plus many more unusual items. Every order is made to your specification, here on-site.

Many of our products are screen printed, hot foil blocked or embossed. Alternatively we can encapsulate items with your print or we can supply these plain too.

Advanced Medical Solutions (AMS) Ltd Product/Market Analysis

We are a UK based company developing and providing leading edge technology to the global wound care and wound closure markets.

AMS was founded in 1991 in Winsford, Cheshire. It floated on the USM in 1994 and moved to a full LSE listing in 1996. In 2002 the Company moved to the AIM market and acquired Medlogic Global Holdings Ltd based in Plymouth, Devon. AMS Plymouth designs and manufactures a range of wound care and non-invasive wound closure products based on cyanoacrylate technology.

Today the Company has a global customer base, is manufacturing out of 4 countries and employs over 400 people.

Aldermans Ltd Product/Market Analysis

From the smallest components to complete fabricated units, at Aldermans we create the engineered metal products which help our clients succeed. We're a family-run, Plymouth-based business with more than 40 years' experience; and we still have the traditional precision toolmaking skills for which we've long been respected. Now, we offer a sophisticated, versatile design and fabrication service which incorporates the latest technology, such as fast-turnaround lasering.

Regardless of the product or the quantity involved, our attention to detail and quality is unwavering, and highly acclaimed. Whether your business is looking for a reliable, quality-driven metalwork supplier; or a development partner who can turn your ideas into reality in the most cost-effective way – we'll be delighted to help.

Products & Services

Bespoke metalwork designs and prototyping
Metal component manufacture
Laser cutting services

Retail shopfittings and point-of-sale displays
Rack cabinets and data enclosures
Metal signage
Specialist seating
Domestic metal splashbacks

Manufacturing Capabilities include:

2D and 3D design, including stress analysis
Power press tooling design and manufacture
Power presses – with capacities up to 250 tonnes
Pressbrake folding – up to 120 tonnes
Amada CNC laser cutting/turret punching
De-burring, finishing and mirror polishing of components
Assembly, sub-assembly and kit packing
Progression tools with capacities up to 160 tonnes, with SMED quick change set-up
Guillotine/sawing – batch or bespoke, straight or angled, to 6mm thickness
Welding – extensive capacity on mig, tig and brazing mild, stainless steel and aluminium

Burts Potato Chips Ltd Product/Market Analysis

Burts Chips are Devon's premium crisps with a big crunch. The company has been hand cooking quality potato chips to perfection for over 16 years. Starting out in a shed on some railway sidings in Devon, before growing into its current home; Burts now have a state of the art factory in Roborough, Plymouth. With innovation at its core, the company follows a creative NPD process, which has seen the launch of flavours including Firecracker Lobster, Spicy Chorizo and even the world's first Guinness crisp, one of the brand's most successful launches to date. Burts also export to over 40 countries nationwide including Germany, Spain, Holland and South Korea.

Burts relies on quality local suppliers to help create its award winning potato chips and even prints the name of the person that hand cooked each packet on the reverse, as well as the field where the potatoes came from – it's this focus on provenance and quality that makes Burts' products such a hit with consumers.

Crumb Rubber Ltd Product/Market Analysis

Our product is primarily used as a cost-effective alternative to virgin polymers and is used in a wide range of plastic and rubber products.

We not only supply the rubber powder for that purpose, but we also help companies develop new and cost effective products and applications.

Crumb Rubber's offices and factory are located in Plymouth, UK. Our state-of-the-art plant began supplying the polymer industries in summer 2007 following a multi-million pound investment.

Hymid Multi-Shot Ltd Product/Market Analysis

Hymid offer injection moulding, injection mould tool-making, tool modifications & repairs: pre-production and prototype tooling and mould tool trials - along with technical plastic injection moulding of low to medium volume, high value components.

Hymid specialise in Two Shot Moulding. This process (also known as 2 shot, multishot, twin-shot, 2k moulding or co-injection moulding) is a technique whereby a component made of two materials (or two colours) is made in one machine cycle, forming a chemical bond – increasing durability and component quality whilst reducing the number of mould tools required and minimising second operations/assembly costs.

Our engineers have many years' experience in plastic moulding and mould tooling: through working with you at the early stage of the product design process, we can optimise your new moulded products through our detailed '*design for manufacture*' analysis.

James Walker Moorflex Ltd Product/Market Analysis

James Walker Moorflex was created in 2000, by merging two James Walker Group companies - Moorside and James Walker Metaflex - bringing together over 100 years' experience at the forefront of sealing technology. Their mutual commitment to manufacturing excellence, service, research and development, together with existing international reputations, ensure that Moorflex is now uniquely placed to deliver the best products, backed by the finest service, world-wide.

This commitment is borne out through the most comprehensive stock availability in the gasket industry, a 24 hour emergency breakdown service, plus the strategic location of manufacturing and service facilities around the globe to provide the levels of local support demanded the company's customers in the oil and gas industry.

Products & Services

Metal, graphite, PTFE, nonmetallic and semi-metallic; the range of gasket materials available is as diverse as the operating environments to which they are subjected. [Product range manual](#)

Wherever a pipe or valve is connected there's a Moorflex gasket to ensure the join is safe, strong and totally reliable - from reactors to heat exchangers, pipelines to pressure vessels.

Latimer Trend & Co Ltd Product/Market Analysis

Latimer Trend is a specialist printer with heritage and has been leaving a unique and distinguished impression for over 126 years, printing high quality journals, periodicals, books, directories and magazines. The company has an unrelenting commitment to its customers and is dedicated to quality, delivery and communication. We provide a personal service to a large number of blue chip professional publishers, print buyers, and Royal warranted societies and institutions.

Our customers have peace of mind that the company can be relied upon to deliver the very best quality and most consistent product. We are trusted with time critical production schedules and have the flexibility to provide quick turn-around times and the ability to respond to changing production requirements.

Our service is provided by a highly trained, and motivated team of professionals with extensive industry experience to take you through the process from start to finish. We have an enviable reputation for ensuring delivery commitments to our customers are met, which is an integral part of the company.

Our factory and all of our processes are strictly controlled and measured to ensure that we meet and exceed international quality standards. Our policies ensure that every care is taken to lessen the impact our production has on the environment.

WJ Meddings (Holdings) Ltd Product/Market Analysis

In recent times the company has evolved into a group, by takeovers, purchases and expansion into property. Founded in the 1930's by William John Meddings, the original engineering company based near to Wembley was a machine tool maintenance company for companies such as Heinz. As the company grew it moved to Slough. The company was formalised as W J Meddings in 1941 and was commandeered by the British Government to produce armaments and drilling machines for the war effort. It was after this period that the decision was made to continue with drilling machine manufacture and the name of Meddings Machine Tools was established. In 1975 the company was moved to Ivybridge, Devon this site was chosen because of its potential to allow the company to expand. It is since this move that the Meddings Group have developed into a multi-faceted engineering group producing products which are sold all over the world.

Mouldtech Solutions Ltd Product/Market Analysis

Based in Devon with customers worldwide, Mouldtech Solutions are specialist high precision injection mould toolmakers. We offer all aspects of tooling from prototype tools, single cavity through to multi cavity high volume tooling. We also offer tooling repairs, refurbishment and modification. We prefer to manufacture tooling onsite but we also offer an offshore tooling service, where we import the tooling which is manufactured from our design. We then strip down and inspect the tooling and then deliver to the customer with all the guarantees of a UK manufactured tool. Mouldtech also undertakes product development, design and management, contract CNC milling and CNC spark erosion using the latest Bridgeport/Hardinge machinery. We are ISO 9001-2000 accredited and members of the GTMA. Mouldtech have a reputation for quality of service and look forward to assisting with your Tooling requirements.

MSubs Ltd Product/Market Analysis

The MSubs design team - some of whom have over 20 years' experience in the field - encompass skills in mechanical, composites, electrical, electronic and software design. Each member possesses a combination of skills in both design and implementation which allows flexibility and adaptability in all aspects of design- no matter the project.

Our facility in Estover, Plymouth consists of a design office adjoining a 1200 square metre workshop housing two 20 tonne travelling gantry cranes. In addition to the main workshop area, we have a purpose-built GL approved GRP workshop. Together, these facilities allow us to manufacture and assemble all elements of submersibles and underwater equipment on site. Because our workshops are directly adjacent to our design office, our Engineers and Technicians are able to work closely with each other in order to stick stringently to design briefs and specifications.

Other Information

Under our management, systems can be designed and constructed under survey and in accordance with the Rules of Classification Societies. These include ABS (American Bureau of Shipping), Lloyds Register of Shipping and GL (Germanischer Lloyd).

We are also able to meet the requirements of Pressure Vessel Codes including ASME PVHO (Pressure Vessels for Human Occupancy), PD5500 and ASME VIII.

Oakmount Control Systems Ltd Product/Market Analysis

System Integrators and Automation Engineers – Benefiting from many years of experience in the design and Manufacture of Industrial Control Systems, Control Panel Manufacture, PC, PLC, HMI and SCADA Software Design, Industrial Machine Networking, SCADA System Design and the Manufacture of Special Purpose Machinery.

Onsite Installation and Commissioning of Control Systems and Automation Equipment.

Supplier of Bosch Aluminium Profile and Engineering Products.

Virtually every application is unique and we have a number of Blue Chip customers in the Food, Pharmaceutical, Aerospace, Infrastructure, Machine Tools, Mineral Processing, Manufacturing and the Water Industry worldwide.

Orchid Plastics Ltd Product/Market Analysis

Orchid Plastics Ltd is an engineering and design-led manufacturer of rotationally moulded plastic products. Our strength is to work with the customer from the early concept stage of designing a new product, assisting in the development of the item to fulfil its functional needs as well as suit the rotational moulding process. Once the design is complete, we project manage the manufacture of tooling, and are able to take on sub-assembly work of the final component to add value to the product we ship.

Rotational moulding inherently produces hollow plastic items. Simple examples would be waste bins and liquid storage vessels such as tanks. More complex products such as panels for bespoke vehicles, or even a header tank that needs to fit into an unusual engine cavity space, are also possible. One distinct advantage of the process is that designers have a greater freedom to produce a component that they require rather than be constrained by certain elements of the manufacturing process.

Tooling is relatively inexpensive when compared to other moulding processes, meaning a low cost of entry when bringing a new product to market. Furthermore, mould tools can be easily modified should a product require a design change or update.

Typical materials are polyethylene and polypropylene but more exotic polymers are also available to suit more demanding applications.

Orchid are able to offer polyurethane foam filling and 5 axis machining facilities, either for roto-moulded products or as a standalone service.

Examples of products currently manufactured for our clients include marine navigation buoys, underground water tanks, medical waste bins, cycle storage products, kayaks, industrial floor cleaning machines, water bowsers, planters, baby changing tables and ice skating aids.

PCH Manufacturing Services Ltd Product/Market Analysis

PCH Manufacturing Services manufacture, supply and install PVC-u windows and doors, Fire Doors, Metal Railings and Signage from our facility based Plymouth. We employ over 60 skilled and professional craftsmen working to produce a diverse range of products for homes, businesses and communities across Plymouth, the South West and nationally. In addition, we offer repair services for metal, wood and PVC products for local business which includes repairs to anything from site metal structures to Double Glazing.

The Window Shop offers the latest in window and door technology. All products are durable, secure and mostly maintenance free. We give you individual and personal attention to detail, and the highest-quality service.

Our Joinery Shop makes wooden interior and exterior doors, specialist fire doors, casement and box frame windows, counters, shop fronts, staircases, furniture and benches using the highest quality timber from sustainable sources.

The Sign Shop can both design and produce anything from exterior and interior signs, vehicle graphics, window graphics, banners and posters, road traffic signs, labels and stickers, to newly available contemporary style canvas wraps for any occasion – and all at extremely competitive prices.

Our Metal Fabrication manufacture metal fencing, railings, balustrades, fire escapes, balconies as well as supply and fit street furniture and metal products.

PEG Precision Engineering Ltd Product/Market Analysis

P.E.G. Precision is one of the South West most prominent Precision Engineering companies, renowned for customer service and detail to quality.

We can offer a complete service including advice, development and prototyping. We have over 26 years' experience as a company in the machining of precision engineered components, and our continual investment in the latest machinery and computer technology ensures we maintain our competitive edge. At P.E.G. we can offer you much more than a sub contract manufacturing facility. We work closely with our clients to develop their ideas and products from inception to production.

We have developed the expertise to produce for our customers the highest quality toolmaking manufacturing either to drawing or reverse engineered, also offering the design and manufacture of special purpose machines to customer's requirements.

We are fully skilled in machining materials such as Nickel Ali Bronze; Brass; all Stainless Steels including 17/4 PH, Ferralium, Amazon, Duplex; Inconel; Alloy 635, Monel, Aluminium and all Plastics etc.

PTG Precision Engineers Ltd Product/Market Analysis

PTG Precision Engineers Ltd. is a well-established sub-contract production engineering company. We are a versatile and flexible company, providing an all-round outsourcing facility to our customers and building our reputation as a provider of quality engineering with enthusiastic and efficient delivery. We focus on developing strong, sustainable and profitable relationships with our customers and suppliers. In doing so, we have built a reputation as a provider of quality, value and rapid delivery. PTG's strengths lie in our flexible approach to machining. We have a wide range of CNC machining centres which are well-equipped to machine one-off prototypes as well as small and medium batch quantities. PTG Workholding Ltd is a well-established company and leading supplier of workholding. We have a wealth of expertise and knowledge in the design and manufacture of all types of workholding equipment.

Permaban Ltd Product/Market Analysis

We make products that protect concrete floors. With almost 30 years' experience, we are well known around the world for our leave-in-place formwork and armoured joints (such as our AlphaJoint and BetaJoint ranges). We also supply dry-shakes, sealants and additives to protect and harden concrete floors and slabs.

By building-in protection during the construction of a floor, our products have been proven to save time and money for building owners and users.

We manufacture in the UK, but work with a large network of international distributors and agents to support our customers, wherever they are. We also hold stocks in strategic locations around the world to ensure rapid supply.

As well as providing a wide range of products suitable for many applications, our in-house design engineers often create custom products for specific projects. All our products are made under the strict guidelines of ISO9001, so quality in design and manufacture is assured. We also work to minimise the environmental impact of our operations and products through careful waste management and clever product design.

Source (Myrna Ltd) Product/Market Analysis

Source has been manufacturing a growing range of cable accessories for over 21 years.

Our manufactured products have grown to include a range of stainless steel cable ties, stainless steel markers, RFID products, self-adhesive cable clips, metal P-clips, and earthing glands.

In addition to these products we manufacture specials, either as one offs or volume production. Source is an ISO 9001 approved company and is an approved manufacturing site for the American Bureau of Shipping (ABS). We have a well-equipped press shop with presses from 10 to 40 tonnes including one Bruderer working in stainless and spring steels.

We have a full tool room with 3 toolmakers and press tool design capabilities. We also undertake wire EDM work for others.

Thornbury Manufacturing Ltd Product/Market Analysis

The company was formed in 1995, and currently employs 28 staff. It's sited in the Plymouth area and occupies a purpose built manufacturing facility of 18,500 square feet.

Thornbury primarily manufactures highly engineered quality products: these include thermoplastic injection mouldings, ferrous and non-ferrous metal pressings and assemblies.

At Thornbury Manufacturing we believe that our well-equipped facility and highly motivated, technically qualified, capable and experienced workforce, which offers a 'one-stop-shop' manufacturing option, has a major advantage in the market place.

Thornbury has a growing reputation for working with customers in developing new projects in all area of production, moulding, press parts and assembly
